

CANADA COAL INC.

Management Discussion and Analysis For The Three and Nine Months Ended June 30, 2017

July 24, 2017

The following discussion and analysis should be read in conjunction with the unaudited condensed consolidated interim financial statements for the three and nine months ended June 30, 2017 and 2016 and the audited consolidated financial statements for the years ended September 30, 2016 and 2015 and related notes included therein. All monetary amounts, unless otherwise indicated, are expressed in Canadian dollars. Additional regulatory filings for the Company can be found on the SEDAR website at www.sedar.com.

Forward-Looking Statements

Certain statements contained in this document constitute “forward-looking statements”. When used in this document, the words “may”, “would”, “could”, “will”, “intend”, “plan”, “propose”, “anticipate”, “believe”, “forecast”, “estimate”, “expect” and similar expressions, as they relate to the Company or its management, are intended to identify forward-looking statements. Such statements reflect the Company’s current views with respect to future events and are subject to certain risks, uncertainties and assumptions. Many factors could cause the Company’s actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements. Given these risks and uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements. The Company does not intend, and does not assume any obligation, to update any such factors or to publicly announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events or developments.

Overview

Canada Coal Inc. (“Canada Coal” or the “Company”) is currently a junior resource mining company with coal licences in Nunavut, Canada. The Company was incorporated on August 26, 2010 under the Business Corporation Act (Ontario) under the name Pacific Coal Corp. On April 12, 2011, the Company changed its name to Canada Coal Inc.

On November 4, 2011, the Company entered into an agreement with Mercury Capital Limited (“Mercury Capital”) in respect to a proposed business combination to be effected by way of an amalgamation of the parties. Under the terms of the agreement, holders of common shares and other securities such as options and warrants of Canada Coal and Mercury Capital, received common shares and other securities of the resulting issuer on a one for one basis. The amalgamation constituted a qualifying transaction for Mercury Capital as defined in Policy 2.4 of the Exchange’s Corporate Finance Manual.

The transaction was accounted for as a capital transaction with the original Canada Coal being identified as the acquirer. The resulting financial statements are presented as a continuance of the original Canada Coal.

Canada Coal Inc. was the resulting issuer from the amalgamation and upon completion of the transaction, was considered a Tier I mining issuer. The amalgamation was effective February 23, 2012 and the Company began trading on the TSX Venture Exchange on February 29, 2012.

The Company currently has no producing properties, and consequently no operating income. The Company is dependent on the equity markets to finance all of its activities and it is anticipated that it will continue to rely on this source of funding to meet its ongoing capital requirements.

Overall Performance

The Company incurred a net loss of \$140,967 for the nine months ended June 30, 2017 compared with net loss of \$138,858 for the same period in the prior year.

In November 2016, the Company signed a non-binding Letter of Intent ("LOI") with Honu Inc., a licensed marijuana grower and producer of marijuana concentrates and edible marijuana products in the State of Washington. The LOI provided for a 90-day period of exclusivity, which would have allowed both parties to exchange information and maintain confidentiality as each party sought to determine whether mutually beneficial business opportunities exist. The LOI did not represent a change of business for the Company. The LOI contained no terms of compensation, and did not contemplate a definitive agreement between the parties. In February 2017, the Company announced that it had terminated discussions due to a breach by Honu Inc. of the exclusivity provisions contained in the letter of intent signed by the parties.

The Company continues to seek other projects and opportunities to enhance shareholder value.

Operating Activities

On September 15, 2010, the Company entered into an agreement with Weststar Resources Corp. ("Weststar") to purchase the outstanding capital of Weststar's wholly-owned subsidiary, Canadian Sovereign Coal Corp. ("CSCC"). CSCC's only asset was an 80% interest in nine coal exploration licences and eight coal exploration licence applications for approximately 585,397 acres of land located in Ellesmere Island, Nunavut. Weststar's 80% interest in the claims was acquired pursuant to a Letter of Intent dated March 18, 2009 between Hunter Exploration Group ("Hunter") and Weststar.

On September 20, 2010, the Company, Weststar and Hunter entered into an agreement whereby Weststar was released from any obligations or commitments under the original Letter of Intent dated March 18, 2009 and 100% interest in the coal licenses and licence applications was transferred to CSCC. Hunter retained a 2% royalty on the licences of which 1% could be purchased by the Company for \$1,000,000.

On April 12, 2011, the Company entered into an agreement to purchase all of the issued and outstanding capital of 5200 Nunavut Ltd. ("5200") from arms length third party vendors. The only assets held by 5200 were interests in seven coal exploration licences representing approximately 157,753 acres of land located in Nunavut. The consideration for the acquisitions noted above is outlined in the notes to the year-end consolidated financial statements.

In 2011, the Company also applied for 51 additional coal exploration licences representing approximately 1,699,477 acres in Nunavut. These licences were subsequently approved.

Canada Coal's acquired coal licences were located on Ellesmere Island and Axel Heiberg Islands, Nunavut Territory, Canada. The project consisted of 75 coal licences geographically distributed as nine discrete exploration areas occupying a total of 989,521 hectares. The licences were held by the Company's two wholly owned subsidiaries 5200 Nunavut Ltd. and Canadian Sovereign Coal Corp. The exploration areas consisted of: Fosheim Peninsula, Sor Fiord/Stenkul Fiord, Strathcona Fiord, Vesle Fiord/South Fosheim, May Point, Bache Peninsula, Li Fiord, Good Friday Bay and Mokka Fiord.

The Company contracted DMT Geosciences Ltd. ("DMT") (formerly Associated Geosciences Ltd.), Calgary, Alberta, to prepare a 43-101 for the coal assets acquired. As part of the 43-101 process, DMT took samples during its on-site visit to Nunavut. The sample results confirm historic reports that the coals in the area covered by the Company's coal licenses range in rank from high volatile bituminous 'C' to lignite. The samples indicated coals that were generally low in ash (5-10%) and sulphur levels of <0.5%, although occasionally exhibit moderate ash values. The coals are considered to be suitable for use as a high quality thermal coal.

The completed 43-101 report is available on SEDAR. The Report indicated that there is coal present in sufficient quantity and quality to merit further evaluation through an aggressive work program. The Fosheim Peninsula was identified as a priority target for a proposed work program based on the level of historical exploration, the region's potential for higher rank coal occurrences, and the area's suitability for

Operating Activities (Continued)

open-pit mining. The Report recommended a two phased exploration program. Phase I would be primarily focused on reconnaissance including mapping and sampling to delineate and prioritize targets. Phase 2 was contingent on the results of Phase I and would consist of a drilling program to move the project forward to defining 43-101 compliant coal resources if possible.

The Company completed the first round of community consultation in Nunavut during October 2011 and the second round in June 2012.

Also in June 2012, the Company received all its required permits to commence its Phase I exploration program. The work program focused on two main objectives: 1) detailed geologic mapping of the Eureka Sound Formation on Ellesmere Island, within licence blocks on Fosheim Peninsula, Bache Peninsula, Strathcona Fiord and Vesle Fiord, and 2) strategic sampling to determine rank and continuity of known and newly discovered coal zones.

The field exploration was performed over a 6 week period between June 16th, 2012 and July 30th, 2012. Personnel were positioned at Environment Canada's Eureka Weather Station and utilized helicopter support to access the project area. The crew included two teams of geologists, a geophysics team, a heritage team (consisting of a paleontologist and archaeologist), local guides, and aircraft personnel.

Sites for detailed geologic mapping and strategic sampling were assessed based on a priority ranking system established following several weeks of field prospecting. Priority ranking was based on continuity of an exposure, structural complexity of an area, and/or quality control sampling. Two geology teams assessed these sites along with a paleontologist, archaeologist, and local guide to mitigate adverse impacts to heritage resources and the environment.

Throughout the field program 39 of the Company's total coal exploration licence blocks were assessed including: 22 licence blocks on Fosheim Peninsula, 8 licence blocks on Bache Peninsula, 1 licence block on Strathcona Fiord, and 8 licence blocks on Vesle Fiord. Fosheim Peninsula was the primary exploration target.

Exploration of these licence blocks included collection at 135 sample locations with 285 individual samples taken in total. Upon completion of the field program, samples were delivered to Birtley Coal & Minerals Testing Division of Calgary, Alberta for testing. Results were classified according to ASTM Standards and range from subbituminous A coal to lignite B. The study identified extensive zones of low-sulphur, low-ash, subbituminous coal, suitable for use as thermal coal.

Secondary objectives achieved during the exploration program included geophysical studies and heritage assessments. Geophysical permafrost studies using ground penetrating radar and ground resistivity equipment were conducted on potential airstrip locales in preparation for future programs and heritage studies were conducted to assist with future project planning.

The Company also commissioned a logistics study to report on viable transport alternatives for future coal operations. The Ice and Marine Shipping Assessment conducted by Enfotec Technical Services is available on the Company's website. The focus of the report was to provide a preliminary ice study and analysis of marine accessibility of Ellesmere Island's West Fosheim Peninsula. The findings of the report in relation to ice conditions and possible shipping scenarios are in line with the Company's expectations. Shipping windows of 2, 3 and 6 months have been considered using Polar Class 3 vessels to transport up to 5.25 million tons per year. A more detailed shipping study, hydrographic surveying and port infrastructure analysis are required to gain a better understanding of the potential logistical alternatives.

Tetra Tech Wardrop Inc., was retained to assist the Company in assessing options for arctic mining operations on its Nunavut Coal licences. Coal Water Slurry technology was being evaluated in order to assess the possible future use of the Company's high grade thermal coal deposits as an alternative energy source in Nunavut. These technologies have the potential to create a diesel-like product that can be easily transported and utilized in Nunavut.

Operating Activities (Continued)

In August 2012, the Company applied for an additional 11 coal exploration licences within the Fosheim Peninsula region in key areas surrounding prospective exploration drill targets. The exploration licences were granted in April 2013.

In December 2012, the Company announced that it had filed an updated independent technical report for its Nunavut Coal Properties. The technical report, entitled "Updated Independent Technical Report, the Nunavut Coal Project" and dated November 26th, 2012 was prepared by DMT Geosciences Ltd. The report details the results of extensive 2012 mapping and sampling program. The report is available on the Company's website and highlights: high priority drill targets to further define coal deposits in Phase 2 program; multiple highly prospective coal zones in close proximity to tidewater; and consistently low sulphur and low ash, high quality thermal coal in samples.

In November 2012, the Company prepared and submitted the required permitting applications for a proposed Phase 2 work program. The application requested a permit for 80 drill holes including 30 primary drill holes, 37 secondary drill holes, and 14 wildcat holes with drilling of approximately 9,000 m of core. The Company's application was subject to a Nunavut Impact Review process. The Company received a number of public comment letters as a result of the process and made significant effort to review and address the concerns raised. A water management plan and a heritage resource management plan were prepared to address some of the concerns raised.

In July 2013, the Company held community consultations in Grise Fiord. The meeting focused on presenting the planned Phase 2 exploration program and to gather feedback to resolve concerns relating to water management, wildlife management, and preservation of heritage resources. The meeting was well attended but many of the local hunters were absent due to seasonal work. The Mayor requested a follow up meeting so that the hunters would have an opportunity to voice their concerns. A subsequent follow up session was held in Grise Fiord in November 2013 and representatives from Aboriginal Affairs and Northern Development ("AANDC") and Qikiqtani Inuit Association ("QIA") were also in attendance. Based on the results of the November meeting it was determined that further consultation was required with the Hamlet of Grise Fiord to adequately identify and address concerns. The Company agreed to withdraw its project application and delay its intended exploration program for 12 months so that a working group, comprised of the Company, the community of Grise Fiord, AANDC, QIA and other government agencies could be established to explore ways to progress the project whilst addressing the concerns of all stakeholders. The working group was to meet regularly over a 12 month period. At the end of the 12 month period, it was anticipated that the Company would resubmit its project application incorporating revisions based on the findings from the joint working group.

A draft proposal for the consultation process was created. A meeting to present the process to the community of Grise Fiord was scheduled for March 2014. Representatives from the Company, QIA, Ministry of Environment and CanNor attempted to attend the meeting however due to high winds which made landing in Grise Fiord impossible, the trip was curtailed in Pond Inlet and the representatives had to turn back. Another meeting was scheduled for May 2014. A Canada Coal representative travelled to Iqaluit however due to the illness of certain work group members, travel to Grise Fiord was postponed. While in Iqaluit, the Company representative met with members of QIA and CanNor to further refine a draft of the terms of reference for the consultation process. The consultation process was further delayed by staffing changes at the QIA.

The consultation process was to consist of two phases. In the first phase, a Community Readiness Assessment was to be conducted by QIA and CanNor. The objective of the Community Readiness Assessment was to determine what kind of development the community would like to see and what resources they would need to benefit from this development. The completion of the Assessment would enable Canada Coal to consider the implications of the findings on its proposed work program and make modifications as required. Since there were no guarantees that the Readiness Assessment would result in approval by the Hamlet of Grise Fiord of any future mineral exploration, the Company wrote off its exploration and evaluation expenditures as of September 30, 2014. The Company applied for extensions on its license expiry dates to accommodate the timing required for the community readiness assessment initiative. One year extensions were granted. The Company believes that a readiness assessment is

Operating Activities (Continued)

required prior to the resumption of a community consultation process regarding a Phase II exploration program. To-date, the Company has not been notified that the consultation process has even begun. Given the resources expended to date on the coal licences and the lack of progress, the Company has decided that it will not renew or reapply for coal licences once they expire. Nine licences expired in March 2016, 21 expired in May 2016, 8 expired in June 2016 and 10 expired in July 2016.

In May 2013, the Company applied for two coal licence areas near Pond Inlet on Baffin Island. As of September 2014, the applications had not been granted so the Company withdrew its applications and requested a refund of its application fee. The refund was received in May 2016.

Coal licences have a three year term. In June 2013, seven of the licence blocks held by the Company expired. The Company submitted applications to reacquire the area covered by the expired licences. As at September 30, 2015, the applications were still outstanding, therefore the Company withdrew the applications and requested a refund of its application fees. The refund was received in May 2016.

No exploration and evaluation expenditures were incurred during the nine months ended June 30, 2017.

Keith McCandlish, P.Geol., of DMT Geosciences Ltd., is the qualified person for this project as defined by NI 43-101.

Results of Operations

The results of operations reflect the overhead costs incurred for coal asset acquisitions and exploration expenses incurred by the Company to maintain good standing with the various regulatory authorities and to provide an administrative infrastructure to manage the acquisition, exploration and financing activities of the Company. General and administrative costs can be expected to increase or decrease in relation to the changes in activity required as asset acquisitions and exploration continues. As at June 30, 2017, the Company had not recorded any significant revenues from its projects.

The Company incurred a net loss for the three months ended June 30, 2017 of \$54,931 compared with a loss of \$41,235 in the same period in the prior year. The increases are attributable to transfer agent and filing fees, professional fees, and shareholder communication and promotion. The increase of \$8,992 in transfer agent and filing fees is attributable to timing of the Annual General Meeting and the payment of TSXV sustaining fees. Last year's Annual General Meeting was held in January 2016 while this year's Annual General Meeting was held in May 2017. In addition, the sustaining fees were paid in March 2016 last year while they were paid in early April 2017. The professional fee increase of \$3,081 relates to legal costs associated with the preparation of materials for, and attendance at, the Annual General Meeting. Shareholder communication and promotion costs of \$1,497 relate to the cost of press releases for corporate updates.

The Company incurred a net loss for the nine months ended June 30, 2017 of \$140,967 compared with a loss of \$138,858 in the same period in the prior year. The majority of the expenditure categories were on par with the prior year.

Summary of Quarterly Results

The following table sets out selected quarterly information for the time periods available. Net loss from operations and net loss are the same for all quarters shown.

Three Months Ended	June 30, 2017	March 31, 2017	December 31, 2016	September 30, 2016
	\$	\$	\$	\$
Revenue - investment income	2,299	2,361	2,506	2,547
Net Loss	54,931	41,127	44,909	174,749
Net Loss per common share	0.00	0.00	0.00	0.01
Three Months Ended	June 30, 2016	March 31, 2016	December 31, 2015	September 30, 2015
	\$	\$	\$	\$
Revenue - investment income	2,710	2,631	2,935	3,723
Net Loss	41,235	48,641	48,981	90,488
Net Loss per common share	0.00	0.00	0.00	0.00

Capital Resources

The Company's cash position at June 30, 2017 was \$1,210,811 compared with a cash balance of \$1,372,863 at September 30, 2016.

At June 30, 2017 the Company had working capital of \$1,217,949 compared to a working capital balance of \$1,358,916 at September 30, 2016. For the nine months ended June 30, 2017, the Company utilized \$162,052 for operating activities.

The Company's cash balance at June 30, 2017 is more than sufficient to fund its general and administrative expenses for the twelve month period ended June 30, 2018. Annual general and administrative expenses are estimated to be \$200,000.

There were no material credit facilities in place as at June 30, 2017.

As at June 30, 2017, there are no commitments to pay cash or issue shares.

Related Party Transactions

For the nine months ended June 30, 2017, the Company entered into the following related party transactions:

- a) Incurred management fees of \$72,000 (2016: \$72,000) to West Oak Capital Partners Inc., a company controlled by R. B. Duncan, Executive Chairman of the Board and CEO.
- b) Incurred management fees of \$45,000 (2016: \$45,000) to Olga Nikitovic (CFO).
- c) Incurred legal fees of \$5,199 (2016: \$2,334) from Aird & Berlis LLP. Tom Fenton (Director and Corporate Secretary) is a partner with Aird & Berlis LLP.

The compensation for key management personnel is identified above in (a) and (b). The Company does not pay any health or post employment benefits.

Off Balance Sheet Arrangements

The Company is not a party to any off balance sheet arrangements or transactions.

Critical Estimates

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from management's estimates.

The areas which require management to make significant judgments, estimates and assumptions in determining carrying values include, but are not limited to:

Income, value added, withholding and other taxes

The Company is subject to income, value added, withholding and other taxes. Significant judgment is required in determining the Company's provisions for taxes. There are many transactions and calculations for which the ultimate tax determination is uncertain during the ordinary course of business. The Company recognizes liabilities for anticipated tax audit issues based on estimates of whether additional taxes will be due. The determination of the Company's income, value added, withholding and other tax liabilities requires interpretation of complex laws and regulations. The Company's interpretation of taxation law as applied to transactions and activities may not coincide with the interpretation of the tax authorities. All tax related filings are subject to government audit and potential reassessment subsequent to the financial statement reporting period. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact the tax related accruals and deferred income tax provisions in the period in which such determination is made.

Share-based Payments

Management determines costs for share-based payments using market-based valuation techniques. The fair value of the market-based and performance-based share awards are determined at the date of grant using generally accepted valuation techniques. Assumptions are made and judgment used in applying valuation techniques. These assumptions and judgments include estimating the future volatility of the stock price, expected dividend yield, future employee turnover rates and future employee stock option exercise behaviors and corporate performance. Such judgments and assumptions are inherently uncertain. Changes in these assumptions affect the fair value estimates.

Changes in Accounting Policies

Adoption of new and amended IFRS pronouncements

The Company has adopted the following new standards, along with any consequential amendments, effective October 1, 2016. These changes were made in accordance with the applicable transitional provisions. The adoption of these standards did not have a material impact on the Company's financial statements.

IFRS 10 Consolidated Financial Statements ("IFRS 10") and IAS 28 – Investments in Associates and Joint Ventures ("IAS 28") were amended in September 2014 to address a conflict between the requirements of IAS 28 and IFRS 10 and clarify that in a transaction involving an associate or joint venture, the extent of gain or loss recognition depends on whether the assets sold or contributed constitute a business.

IAS 1 Presentation of Financial Statements ("IAS 1") was amended in December 2014 in order to clarify, among other things, that information should not be obscured by aggregating or by providing immaterial information, that materiality consideration apply to all parts of the financial statements and that even when a standard requires a specific disclosure, materiality considerations do apply.

Changes in Accounting Policies (Continued)

Future accounting changes

Certain new standards, interpretations and amendments to existing standards have been issued by the IASB or IFRIC that are mandatory for accounting periods beginning after October 1, 2016 or later periods. Many are not applicable or do not have a significant impact to the Company and have been excluded. The following have not yet been adopted and are being evaluated to determine their impact on the Company.

IFRS 9 Financial Instruments: Classification and Measurement ("IFRS 9"), effective for annual periods beginning on or after January 1, 2018, with early adoption permitted, introduces new requirements for the classification and measurement of financial instruments.

IAS 7 Statement of Cash Flows ("IAS 7") was amended in January 2016 to clarify that disclosures shall be provided that enable users of financial statements to evaluate changes in liabilities arising from financing activities. The amendments are effective for annual periods beginning on or after January 1, 2017.

Financial Instruments

The Company is required to disclose information about the fair value of its financial assets and liabilities. Fair value estimates are made at the date of the statement of financial position, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties in significant matters of judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect these estimates.

The carrying amounts of cash, receivables and accounts payable and accrued liabilities on the condensed consolidated interim statement of financial position approximate fair market value because of the limited term of these instruments. The Company's cash equivalents classified as held-for trading are carried at fair value. The fair value is determined by reference to observable inputs other than quoted prices in active markets for identical assets.

The Company's risk exposures and the impact on the Company's financial instruments are summarized below:

Credit risk

Credit risk is the risk of loss associated with a counterparty's inability to fulfil its payment obligations. The Company's credit risk is primarily attributable to receivables. The receivables primarily relate to sales tax due from the Federal Government of Canada. The Company has no significant concentration of credit risk arising from operations. Management believes that the credit risk concentration with respect to its receivables is remote.

Liquidity risk

Liquidity risk is the risk that the Company will not have sufficient cash resources to meet its financial obligations when they come due. The Company generates cash flow through its private placements in the equity markets. All of the Company's financial liabilities have contractual maturities of less than 30 days and are subject to normal trade terms. The Company has sufficient cash to meet its general and administrative expenses for the next twelve months.

Financial Instruments (Continued)

Market risk

(a) Interest rate risk

The Company has cash balances and no interest-bearing debt therefore, interest rate risk is minimal.

(b) Foreign currency risk

The Company's functional and reporting currency is the Canadian dollar and major expenditures are transacted in Canadian dollars. The Company's exposure to foreign currency is minimal. Management does not hedge its foreign exchange risk. A 1% change in foreign exchange rates between the Canadian and US dollar at June 30, 2017 would not have a significant impact on the Company's financial statements.

(c) Commodity and equity price risk

The Company is exposed to price risk with respect to commodity prices and equity prices. Commodity price risk is the potential adverse impact on the Company's earnings and value due to volatility in commodity price movements. Equity price risk is the potential adverse effect on the Company due to movements in individual equity prices or the stock market in general. The Company closely monitors commodity prices, individual equity movements and the stock market volatility to determine the appropriate course of action to be taken by the Company.

Commodity prices could adversely affect the Company's future profitability. Even though the Company is not currently a producer and is not expected to be for a number of years, commodity prices may affect the completion of future equity financings and therefore, the Company's liquidity.

(d) Sensitivity analysis

Based on management's knowledge and experience of the financial markets, the Company does not expect material movements in the underlying market risk variables over the next three-month period.

Proposed Transactions

The Company continues to review and assess possible transactions.

Contingencies

The Company does not have any contingencies or commitments other than those disclosed in the notes to the condensed consolidated interim financial statements.

Subsequent Events

There are no material subsequent events other than those disclosed in the notes to the condensed consolidated interim financial statements.

Management's Responsibility for Financial Statements

The information provided in this report, including the financial statements, is the responsibility of management. In the preparation of these statements, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgements and have been properly reflected in the financial statements.

Risks and Uncertainties

The Company's financial condition, results of operation and business are subject to risks. The following are identified as the main risk factors:

Financing

The Company is reliant upon equity financing in order to continue its operations because it is in the business of mineral exploration and does not derive any income from its mineral assets. There is no guarantee that future sources of funding will be available to the Company. If the Company is not able to raise additional funding in the future, it will be unable to carry out its operations.

General Resource Exploration Risks and Competitive Conditions

The resource exploration industry is an inherently risky business with large capital expenditures and volatile commodity markets. The marketability of any coal discovered may be affected by numerous factors that are beyond the Company's control and which cannot be predicted, such as market fluctuations, costs to develop, infrastructure and processing equipment, and changes to government regulations, including those relating to royalties, allowable production, importing and exporting of minerals, and environmental protection. This industry is intensely competitive and there is no guarantee that, even if commercial quantities are discovered, a profitable market will exist for their sale. The Company competes with other junior exploration companies for the acquisition of coal licences as well for the engagement of qualified contractors. Coal prices can fluctuate widely, and they are determined in international markets over which the Company has no influence.

Governmental Regulation

Regulatory standards continue to change, making the review process longer, more complex and therefore more expensive. Exploration and development on the Company's coal licences is affected by government regulations relating to such matters as environmental protection, health, safety and labour, mining law reform, water use, land use, land claims of local people, restrictions on production, price control, tax increases, maintenance of claims and tenure. There is no assurance that future changes in such regulations couldn't result in additional expenses and capital expenditures, decreasing availability of capital, competition, reserve uncertainty, title risks, and delays in operations. The Company relies on the expertise and commitment of its management team, advisors, and contractors to ensure compliance with current laws.

Permits and Licenses

The operations of the Company are subject to a numerous laws and regulations governing protection of the environment, protection of historic and archaeological sites, waste disposal, protection of endangered species and other matters. The Company is required to have a number of licenses and permits from various governmental authorities to carry out its activities. These permits relate to virtually every aspect of the Company's exploration activities. Obtaining permits can be a complex, time-consuming process. There can be no assurance that the Company will be able to obtain the necessary permits on acceptable terms, in a timely manner or at all. The cost of delays associated with obtaining permits or complying with the permits could halt, materially delay or restrict the Company from continuing or proceeding with existing or future operations.

Disclosure Controls and Procedures

TSX Venture listed companies are not required to provide representations in the annual filings relating to the establishment and maintenance of Disclosure controls and procedures ("DC&P") and Internal controls over financial reporting ("ICFR"), as defined in National Instrument 52-109. In particular, the CEO and CFO certifying officers do not make any representations relating to the establishment and maintenance of (a) controls and other procedures designed to provide reasonable assurance that information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation, and (b) a process to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's IFRS. The issuer's certifying officers are responsible for ensuring that processes are in place to provide them with sufficient knowledge to support the representations they are making in their certificates regarding the absence of misrepresentations and fair disclosure of financial information.

Disclosure Controls and Procedures (Continued)

Investors should be aware that inherent limitation on the ability of certifying officers of a venture issuer to design and implement on a cost effective basis DC&P and ICFR as defined in National Instrument 52-109 may result in additional risks to the quality, reliability, transparency and timeliness of interim and annual filings and other reports provided under securities legislation.

Other MD&A Requirements

As at the date of this MD&A, the Company had 43,449,750 common shares issued and outstanding.

Stock options of the Company outstanding at the date of this MD&A were as follows:

Options	Exercise Price \$	Expiry Date
200,000	0.20	January 23, 2019
2,500,000	0.05	September 22, 2021
2,700,000		

There are no warrants of the Company outstanding at the date of this MD&A.
